Network Infrastructure & Security

Depending on your business, we will come-up proposal
of your network set-up with consideration of below:

Office Network:

Selecting adequate internet service provider in your area for speed and stability of line and back-up plan

Design and setup office local area network, **LAN** and secured remote access with **VPN**

Wire and Wireless connection with site survey

Security:

Firewall to protect your network and data

Blocking SPAM email from villus

Private data protection (CCPA,GDPA if applicable)

File sharing:

File server set-up with access control

Productivity:

Website access control to limit for business use
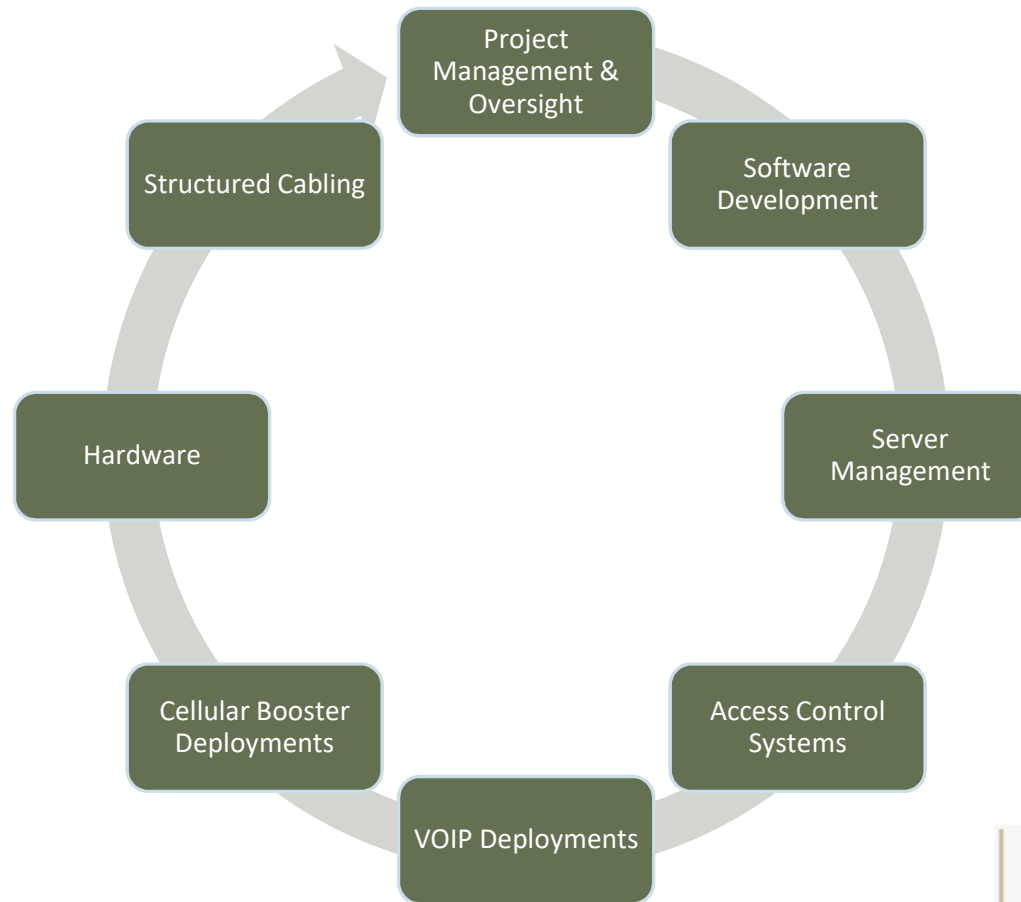

Business continuity:

Setting-up **back up server**

Maintenance:

Network administrator to maintain and monitor your network in case of line-down, slow speed and any issue to interrupt your business due to network related issue.
